

Extended service life of wind turbines

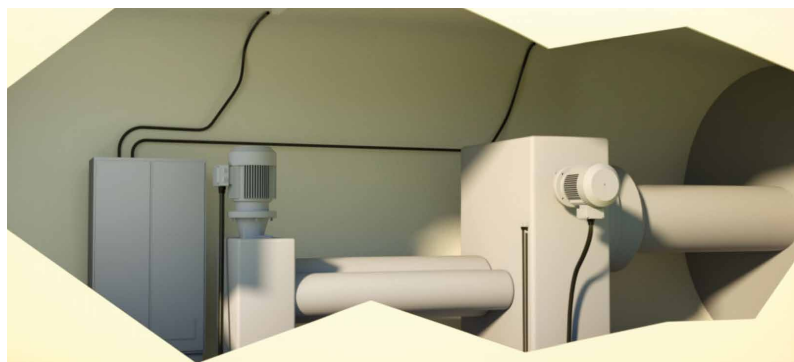

For climate protection and for an independent energy supply, we must increasingly rely on renewable energies in the future. Wind power plays a key role in the generation of green electricity. Wind turbines have to withstand extreme climatic conditions. To ensure that the energy generated reaches where it is needed, suitable cable protection is essential. UV resistance and fire protection are indispensable!

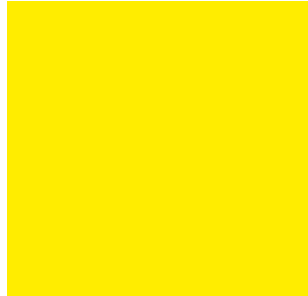

FRÄNKISCHE Industrial Pipes offers the perfect solution for wind turbines: Thanks to the wind- and UV-resistant FIPSYSTEMS® cable protection systems, sensitive cabling and lines are protected against extreme loads.

FIPSYSTEMS® products for wind power

- meet the highest fire protection requirements
- are robust yet flexible
- UV and weather resistant for up to 40 years
- corrosion and abrasion resistant
- allow retrofitting
- offer a matching range of accessories

FIPSYSTEMS® corrugated conduits and accessories
