R I G O P L A N[®]

Set the benchmark.

Plan stormwater management.

www.rigoplan-software.com

**Clear, intuitive,
versatile and smart.**

We have completely upgraded our dimensioning software and have added new features to RigoPlan 8.0. The software is based on the latest standards and guidelines, such as the DWA-A 102-2 worksheet.

Water is a powerful and disruptive force.

The consequences of climate change are apparent: Sudden extreme heavy rainfalls become more frequent, and more and more impervious surfaces are the cause of flooding. For over 20 years, we have been applying our knowledge and experience to reconcile economy, efficiency and ecology in stormwater management to sustainably protect people and the environment.

In order to make designing and planning stormwater management systems even clearer and smarter in the future, we have relaunched our established RigoPlan software: The web application in the 8.0 version is even more user-friendly and intuitive to operate.

Two main modes: material list mode and dimensioning mode

Material list mode:

Create product lists with cost estimates and tender texts in all standard formats for download.

Dimensioning mode:

Design and dimension different types of stormwater management systems in "Quick & Easy" or "Expert Mode" according to current standards.

Efficient and clear project processing:

Add and manage different project variants.

Automatic rainfall data determination:

KOSTRA-DWD rainfall data integrated via the project location. Additionally users can also generate individual rain data series.

Graphical representation in the system configurator:

Visual representation of the selected system of stormwater treatment systems, storage/infiltration systems and other components.

"With the latest version of our tried and tested Rigoplan software, we are setting new benchmarks in digital planning of stormwater management systems and offering a future-proof solution in terms of virtual consulting."

– Stephan Haala, FRÄNKISCHE Team Lead Drainage System Consulting

Why choose RigoPlan® 8.0?

- Clear structure and intuitive operation
- Smart features
- Safety through standard-compliant planning and error detection
- Web-based and can be used without installation – always at hand
- Free
