

## The first re-usable transport protection

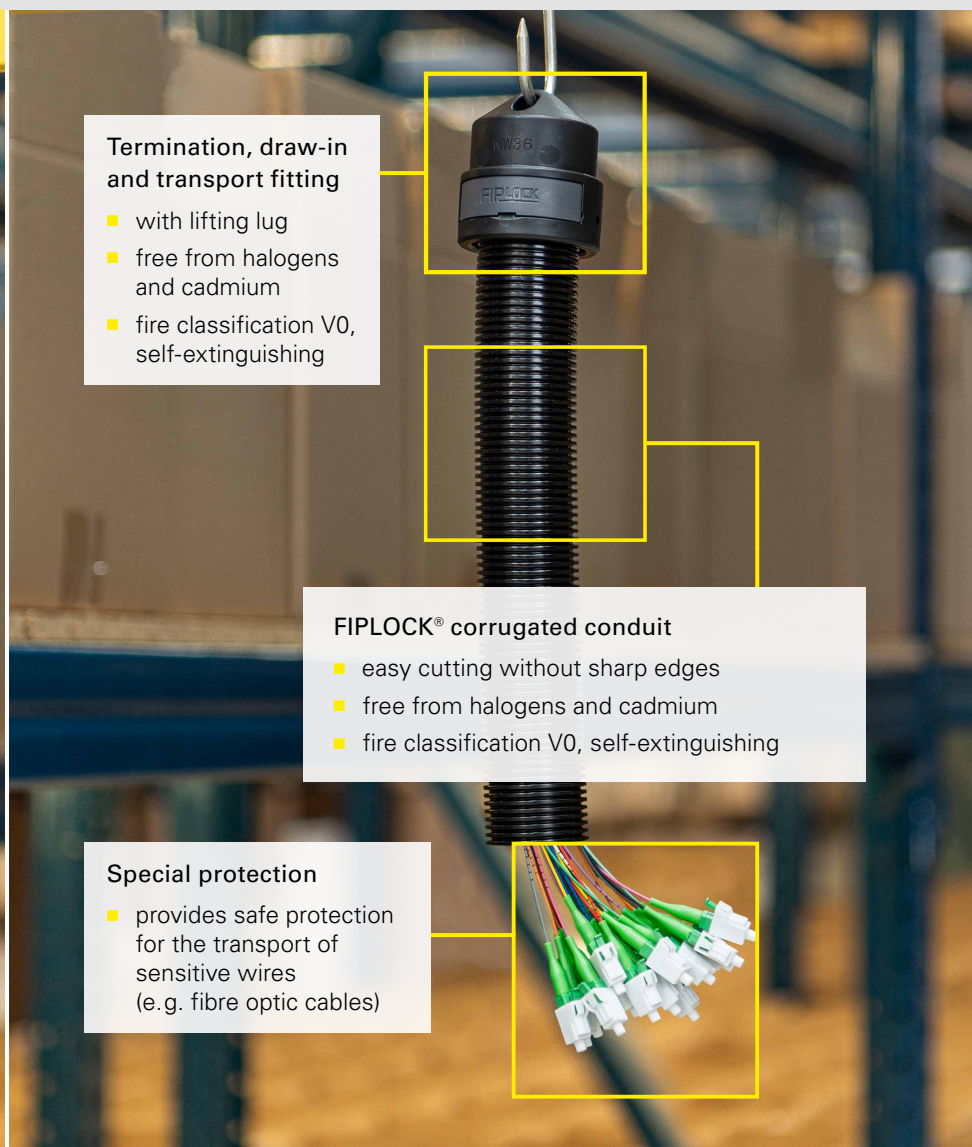

The termination fitting with lifting lug, ASPA-HV, is applied at the end of a corrugated conduit and offers the excellent connecting and sealing performance of the FIPLOCK® ONE fittings.

- cost saving by re-usability
- usable as a seal-tight conduit termination or as a lifting device
- can be used for pull-in of cables/sensitive wires
- length of conduit can be cut individually
- included borehole at the adapter end enables hanging options with a hook, rope or similar
- light conduits with high peak-load protect the cables optimally

### Cable protection system

- safe connection, fulfills IP69
- pre-assembled and ready-to-fit
- o-lock can be opened with a commercially available slotted screwdriver

### Termination, draw-in and transport fitting

- with lifting lug
- free from halogens and cadmium
- fire classification V0, self-extinguishing

### FIPLOCK® corrugated conduit

- easy cutting without sharp edges
- free from halogens and cadmium
- fire classification V0, self-extinguishing

### Special protection

- provides safe protection for the transport of sensitive wires (e.g. fibre optic cables)
